

CLIENT WORK INFRASTRUCTURE

Firma

Product Narrative Document

Vision & Category Creation

Firma turns Google Drive into a branded client portal — the infrastructure layer for client work that enables repeatability, scale, and consistency across every engagement.

The Infrastructure Analogy

Every major category of work has found its infrastructure layer. Client work has not — until now.

- AWS — infrastructure for applications
- Stripe — infrastructure for payments
- Firma — infrastructure for client engagements
- Firma — infrastructure for client engagements (atop Google Drive)

Core Insight

Client work is fundamentally document and deliverable driven — not task-driven. Yet every tool in the market addresses only a fragment of the problem.

- Drive solves storage
- Notion solves flexible workspace
- PM tools solve task tracking
- Firma provides engagement-level structure — the missing layer

None provide engagement-level structure.

📌 A premium offering demands a premium client showcase. Consumer-Grade Ease | Institutional Trust | Frictionless Delivery

Who Is firmä For?

Built for marketing-led firms and leaders — fractional executives, marketing agencies, strategic consultants, and advisory partners — who deliver their value through documents.

Fractional CMO

Managing 5–15 clients simultaneously with no unified system. High pain, fast decision cycles, no compliance friction, high willingness to pay.

Marketing Agencies

Juggling many clients and recurring deliverables — retainers, campaigns, and approvals — without migrating files off Google Drive.

Strategic Consultants

Poor engagement organization and context loss between project phases. Need structured, reusable systems across clients.

Fractional CFO / COO / CAIO

Fractional executives across functions who deliver strategy and oversight through structured document workflows.

Advisory Partners

Ongoing, high-trust advisory relationships. A permanent digital home for knowledge, board-ready packs, and shared folders.

Audit & Compliance / Corporate Trainers

Compliance work with structured docs. Securely distribute courseware and video assets with controlled expiration.

The 'Zip File' Dump —
Overwhelms clients and
looks amateur. Dilutes your
value instantly.

Version Chaos — Using
'Strategy_Final_v2_EDIT.pdf'.
High risk for execution errors.

Broken Experience —
Commanding high-ticket fees
with low-budget delivery
mechanisms.

Delivering Premium Strategy in a 'New Folder (2)' Feels Wrong. High-ticket clients expect a high-ticket experience.

Why Now — Infrastructure Evolution

The market has evolved through distinct phases, each solving a narrower problem than the one before. We are now at the inflection point where the gap is most visible and most painful.

BEFORE — Document Chaos

Inefficient, manual document sharing results in productivity loss, client dissatisfaction & security gaps. Files scattered across email, WhatsApp, and raw Drive links.

AFTER — The firmă Calm
firmă centralizes document management, allowing information to flow securely and seamlessly. One branded portal per client. One-click Wrap when the engagement ends.

Client work needs structured infrastructure — not more tools.

Problem Deep Dive

The Nature of Client Work

Client work is inherently multi-client, context-heavy, iterative, and document-centric. It does not fit neatly into either file-based or task-based paradigms.

Multi-client

Parallel engagements with distinct contexts, deliverables, and stakeholders

Context-heavy

Each engagement carries history, decisions, and institutional knowledge

Iterative

Work evolves through cycles of feedback, revision, and delivery

Document-centric

Deliverables are documents — strategies, reports, playbooks, decks

Observed Pain Patterns

These are not theoretical problems. They surface consistently across every segment of client-facing professionals.

Folder chaos across clients

No consistent structure means every engagement is organized differently, making handoffs and audits painful.

Duplicate work across engagements

Without reusable systems, teams rebuild the same frameworks from scratch for every new client.

Context loss in communication

Critical decisions buried in email threads and Slack channels, invisible to the broader team.

No standardized delivery

Quality and consistency vary by individual, not by system.

Zombie links after engagement ends

Raw Drive links stay active long after contracts close, exposing IP.

The Hidden Cost of Document Chaos

Trust Erosion

Clients associate disorganized file sharing with amateur business practices

Zombie Links

Shared links remain active 1yr post-contract

Unpaid Usage

Consulting IP reused without ongoing payment

Data Leakage

Client files reshared to unauthorized emails

Lost Productivity

Hours per week spent searching across email threads

Product Thesis & Competitive Landscape

The fundamental reframe that drives every product decision — and why no existing product owns this position.

The engagement is the atomic unit of client work — not the task, not the page, not the file.

Competitive Landscape

Category	Competitors	Why They Fall Short
Client Portals	Clinked, FuseBase, SuiteDash, FileCloud	Surface-level portals, no engagement-level design, no Google Drive integration
Doc Management	Egnyte, Huddle, SmartVault, ShareFile, MyDocSafe, Docusoft, TitanFile	Enterprise-heavy, compliance-first, no client-facing engagement structure
Cloud Storage	Google Drive, OneDrive, Dropbox, Box, DocSend	Storage without structure, no portal layer, no access revocation
Project Management	Asana, Monday.com, Notion, ClickUp	Task-first not engagement-first, no document delivery layer
No-Code Tools	Airtable, Softr	Too flexible, heavy setup, no native Google Drive integration

How Firma Is Different

Firma organizes around Engagements — the natural unit of how client work is scoped, delivered, and measured.

- Branded client portal atop Google Drive — non-custodial
- Engagement hierarchy: Firm → Client → Engagement → Document
- Persona-based access control (4 roles)
- One-click Wrap — instant access revocation at engagement close
- Pricing by engagement volume, not headcount
- Layered above existing tools — not replacing them

Firma sits at the intersection of all four categories without competing head-on with any. No product currently combines: branded client portal + Google Drive integration + engagement-level structure + one-click Wrap.

Core Data Model — The Moat

Firma's data model is not an implementation detail. It is the product's primary competitive advantage — a structure that mirrors how professional services firms actually operate.

This hierarchy mirrors real-world operations and enables capabilities that flat tools cannot replicate.

Context Preservation

Every document, decision, and deliverable lives within its engagement context — never orphaned in a folder.

Reusable Systems

Engagement templates allow firms to standardize delivery and replicate successful work across clients.

Multi-client Scalability

The model scales naturally from one client to fifty without structural breakdown or context collapse.

ICP & Persona Evolution

Firma evaluated multiple segments before converging on the highest-signal initial customer profile.

Segments Evaluated

Initial Exploration

Agencies, consultants, finance firms, healthcare providers

Finance / Tax — Rejected

Compliance-heavy, high security expectations, long sales cycles

Healthcare / Legal — Rejected

Regulatory barriers, trust barriers, slow adoption cycles

Marketing Agencies — Queued

High document volume, repeatable client engagements, strong fit for structured portals. Queued for validation after Fractional CMO traction.

Fractional CMOs — Selected

High pain, fast decision cycles, no compliance friction, high willingness to pay

Why Fractional CMOs Win

The fractional CMO persona represents the ideal convergence of pain intensity and adoption velocity.

- **High pain** — managing 5–15 clients simultaneously with no unified system
- **Fast decision cycles** — individual or small team purchase, no procurement
- **No compliance friction** — unlike finance or healthcare verticals
- **High willingness to pay** — professional services economics justify tooling investment
- **Network density** — tight professional communities accelerate word-of-mouth

Product-Market Fit Hypothesis

Firma's PMF conditions are specific and deliberate. The product is designed to win decisively within a defined profile before expanding.

Document-Heavy Workflows

Teams whose primary output is documents, reports, strategies, and deliverables — not code or physical goods

Repeatable Engagements

Work that follows recognizable patterns across clients — where templates and reuse create compounding value

Small Teams (1–49)

Organizations large enough to feel the pain of disorganization but small enough to adopt quickly

Multi-client Context

Professionals managing parallel client relationships where context separation is critical

Fractional CMOs

Primary pain: multi-client chaos and absence of reusable systems across engagements

Agencies

Primary pain: inconsistent delivery quality and inability to standardize client-facing work

Consultants

Primary pain: poor engagement organization and context loss between project phases

MVP Scope — Deliberate Design

Firma's MVP reflects a principled decision about what to build and, critically, what not to build. Scope discipline is a strategic choice, not a resource constraint.

What Was Built

- Structured engagement hierarchy (Firm → Client → Engagement → Document)
- Google Drive integration for low-friction adoption
- Engagement templates for repeatable delivery
- Document organization within engagement context
- Custom branded client portal (white-label, logo, brand system)
- Persona-based access control (4 engagement roles: Engagement Lead, Contributor Internal, Contributor External, Viewer External)
- One-click engagement closure ("Wrap") — instantly revokes all client access
- Engagement activity audit log (30-day history on Standard)
- Document comment threads for feedback & approvals
- Non-custodial architecture — files stay in Google Drive, never migrated

What Was Deliberately Excluded

- Task management — Asana and Linear already solve this
- Chat and messaging — Slack already solves this
- File storage — Drive and Dropbox already solve this

The exclusions are as important as the inclusions. Firma avoids becoming "another tool" by refusing to replicate what already exists.

 The MVP is not a stripped-down version of a larger vision. It is a precise instrument designed to solve one problem exceptionally well before expanding scope.

Integrations Strategy — Phase 1

Google Drive integration — non-custodial, fully encrypted direct-to-Drive tunnel. Files stay in your Drive.

Integrations Strategy — Phase 2

OneDrive integration (Coming Soon).
Dropbox, Box, and Notion to follow.

Trust Architecture & Security

Your Business. Your Drive. Your Asset. Your Control. Organize your files without holding them hostage.

Non-Custodial by Design

firmă assumes a non-custodial role. Files stay in your Google Drive. If you leave, you keep everything exactly as it is — folders, files, structure. Nothing is held hostage.

YOUR DRIVE · YOUR FILES

You Own The Asset

We assume a Non-Custodial role. Files stay in your Google Drive. Connect your existing storage. If you leave, you retain everything exactly as is. Fully encrypted direct-to-Drive tunnel.

Enterprise Look for Clients. IP Protection for You

Eliminate 'please resend the file' friction with a polished portal, logo, and brand system. Deliver a premium client experience while keeping raw Drive links out of circulation.

Real-Time Analytics

Track views, downloads, and engagement across your portal in real-time. Views: 1.2K | Downloads: 386 | Engaged: 74%

Ease of Governance

Self-destruct shares, internal-only tags, and engagement wrap-up automation — fewer zombie links, clearer IP boundaries.

How firmă Touches Your Data

Logic runs on our servers; files stay in your Drive. firmă only stores the metadata needed to power your dashboard, audit logs, and engagement hierarchy — never your actual file contents.

01

Browser — Client-side app via HTTPS/TLS 1.3

02

firmă Infrastructure — Secure API gateway, business logic, auth service (OIDC/OAuth 2.0)

03

Metadata DB — AES-256 encrypted, stores structure only

04

Google Drive — Your Drive. Your asset. Your control.

NDA-Ready Security — Confidentiality is your currency. firmă separates metadata (structure) from data (content) for maximum IP protection.

Pricing & Plans

Firm-scale delivery. Unlimited members. Firm-based tiers. Pricing follows active engagements — not headcount.

Sandbox (Free)

Free · No card required

- 1 firm per subscription
- 10 active engagements
- Explore the portal, firm hierarchy, and engagements on your Drive — no card required

CTA note: "Step up to a 30-day Standard trial when ready"

RECOMMENDED

Standard

\$39/month billed annually

- 1 firm per subscription
- 10 active engagements
- Unlimited internal & external users
- Full client portal on Google Drive
- Engagement activity audit (30 days)
- Document comment threads & approvals
- One-click engagement closure (Wrap)

Pro

\$79/month billed annually

- 5 firms per subscription
- 25 active engagements
- Everything in Standard plus:
- Custom subdomain
- Engagement & document templates
- Advanced review & approval workflow
- Document versioning

Status: Coming Soon

Business

\$119/month billed annually

- 10 firms per subscription
- 50 active engagements
- Everything in Pro plus:
- Self-destruct timers & Never Share tags
- Automated follow-ups & reminders

Status: Coming Soon

No per-seat charges. Add as many team members, clients, and collaborators as you need without additional charges. Enterprise available for custom DNS, SSO/SAML, and multi-firm arrangements.

Positioning, Pricing & Strategic Outlook

Category

Client Work Infrastructure

One-Line Pitch

Firma helps fractional leaders and agencies organize client work into structured, reusable engagement systems — on top of tools they already use.

Pricing Philosophy

Pricing follows active engagements and firm tier — **not** headcount. Unlimited internal and external users on all paid plans.

- **Sandbox:** Free, no card required — 1 firm, 10 active engagements. Explore the portal.
- **Standard:** \$39/month (billed annually) — 1 firm, 10 active engagements. Full client portal on Google Drive.
- **Pro:** \$79/month (billed annually) — 5 firms, 25 active engagements. Advanced review & templates. (Coming Soon)
- **Business:** \$119/month (billed annually) — 10 firms, 50 active engagements. For established firms. (Coming Soon)
- **Enterprise:** Custom pricing — Custom firm package, negotiated engagement limits.

Target Markets

Primary: United States, United Kingdom, Canada, Australia

Secondary: India

What Makes Firma Defensible

- Not replacing existing tools — layering above them
- Not competing head-on with any incumbent
- Creating a new category with no direct competitor

Core Strategic Bet

Structure beats flexibility at scale. As client-facing teams grow, the cost of disorganization compounds. Firma's structured model becomes more valuable — not less — as usage increases.

Long-Term Platform Potential

- AI layer on structured engagement data
- Cross-client intelligence and benchmarking
- Workflow automation across the engagement lifecycle

Marketing Agencies	firma.bz/landing/marketing-agencies	Dedicated landing page for marketing agencies running retainers, campaigns, and client deliverables.

Go-To-Market Strategy

Initial GTM motion anchored in direct outreach — LinkedIn and Email as the primary acquisition channels before paid or inbound scale.

Phase 1 — Direct Outreach

LinkedIn & Email

The highest-signal early customers will not come from ads — they will come from direct, targeted outreach to professionals who feel the pain daily.

ICP Targeting

Identify Fractional CMOs, Marketing Agency owners, and Strategic Consultants on LinkedIn. Filter by: solo/boutique operators, 5–20 clients, active content posters, Google Workspace users.

LinkedIn Outreach

Personalized connection requests referencing their specific pain (Drive links, client handoffs, engagement wrap). Follow-up sequence: connect → value message → demo ask. Target: 50–100 outreach/week per rep.

Email Outreach

Cold email to agency owners and fractional leaders sourced from LinkedIn, directories (Clutch, GrowthMentor), and community lists. Sequence: 3-touch over 10 days. Subject line angle: 'Still sending raw Drive links to clients?'

Demo & Convert

30-min demo via Calendly. Show the portal, Wrap, and audit log. Offer 30-day Standard trial. Goal: 10 paying customers from first 100 demos.

GTM Principles

- Do things that don't scale first — manual outreach before automation
- Sell to the pain, not the product — lead with zombie links, IP exposure, and brand risk
- ICP-first — Fractional CMOs before expanding to agencies and consultants
- Referral loop — every happy customer is a warm intro to their network
- Community presence — show up in Fractional CMO Slack groups, agency forums, LinkedIn communities

Success Metrics — Phase 1

Metric	Target
Outreach per week	100 (LinkedIn + Email combined)
Demo conversion rate	20%+
Trial-to-paid conversion	40%+
First 90-day paying customers	10–20
CAC target	Under \$200

Phase 2 — Inbound & Content (Post-PMF)

LinkedIn thought leadership from founder. SEO content targeting 'client portal for fractional CMOs', 'Google Drive client portal'. Partner with fractional executive communities and agency networks.
